### Media release

15 September 2015

**Port Vila, Vanuatu** – Increasing the climate and disaster resilience of urban development planning is the focus of a three day training being held in Port Vila this week (15-17 September) for representatives of national and municipal government.

As a country that experiences a range of natural disasters it is important that urban development in Vanuatu takes into consideration the risk of hazards such as flooding, earthquake and tsunami in order to reduce the impact of future disasters and create safer, more resilient towns and cities.

## Resilient urban development planning for Vanuatu

Written by

Tuesday, 15 September 2015 15:50 - Last Updated Sunday, 20 September 2015 20:06

---

This is particularly important in the wake of major disasters such as Tropical Cyclone Pam which resulted in damage and losses of at least VT 48.6 billion (US\$449.4 million), equivalent to 64.1% of Vanuatu's Gross Domestic Product.

The training is facilitated by the Secretariat of the Pacific Community (SPC) in partnership with New Zealand's National Institute for Water and Atmospheric Research (NIWA) with support from the Asian Development Bank (ADB).

During the training participants will be introduced to newly developed user-friendly tools that apply existing hazard and risk assessment information to support decision making in urban development planning.

Urban planners and infrastructure engineers will gain skills and knowledge to customise the new tools to Vanuatu's context and then make risk-informed urban planning, mitigation and adaptation decisions leading to safer and more resilient urban environments.
