

Technical Workshop

Written by Administrator

Friday, 19 April 2013 16:49 - Last Updated Wednesday, 03 July 2013 14:25

The Technical Workshop plays a significant role in supporting work in the [Marine Coastal Science & Survey](#)
[Pacific Sea Level Monitoring](#)

,
[Geology Minerals & Hydrocarbons](#)

and

[Regional Maritime Boundaries](#)

sectors as well as SOPAC's

[Water and Sanitation](#)

and

[Disaster Risk Reduction](#)

programmes. The Technical Workshop is indispensable to project implementation success, particularly where substantive mobilisation and deployment tasks are concerned (e.g. geophysical, bathymetric, topographic surveys etc.).

The Technical Workshop also has a direct role in the procurement, servicing, modification, repair, calibration and cataloguing of oceanographic, geodetic, climate and geological equipment and instruments held by the SOPAC Division. It deploys, mobilises and demobilises millions of dollars' worth of equipment safely and successfully every year.
